

## GrooveToons Speaker and Alarm Clock Matches Your iPod Nano

Published by Chip Chick August 20th, 2007 in iPod Docks, Clocks and Apple.

The GrooveToons [Alarm Clock](#) is molded in the basic shape of a traditional alarm clock but it's got cartoony curves and googly eyes that stare back at you. A snooze button is included on the clock, and the clock and alarm function will automatically show up on your Nano once you dock it on to the alarm clock. The clock is also available in 5 metallic colors that will match the 2nd generation Nano: green, pink, blue, black and silver and it retails for £29.99 at [iWorld](#). And in case the GrooveToons Speaker looks familiar, it might be because you've seen the retro style ipod alarm clock around. But between the two of them, the GrooveToons Alarm Clock is a lot cuter, and we like the color choices better - however, the GrooveToons clock is only compatible with the ipod Nano, while this other clock is compatible with the 5G ipod with Video.
