

Cygnett GrooveCell and GrooveCruise - groovy By Dave Carter

Following on from our recent **group test** of mobile phone speaker docks, comes a new offering from Cygnett, the GrooveCell. Focusing on portability the Groovecell is built fully foldable and will work with almost any music phone (full list [here](#)). Powered by USB or 6 x AAA the speakers will retail for wallet friendly £25.

Also new from Cygnett is the GrooveCruise II, an FM transmitter for MP3 players and music phones. The GrooveCruise II plugs into your car's cigarette lighter and allows you to transmit the music to your FM radio. Featuring a backlit LCD (for day and night use), memory of the last frequency used and the ability to charge your device, the GrooveCruise II will set you back £50.
